[DbSchema 8.2.7 Crack](#)

The screenshot displays the DbSchema 8.2.7 interface. At the top, a green header shows the 'film' database name. Below it, a schema diagram illustrates the relationships between tables: 'film', 'film_category', 'category', 'film_actor', and 'actor'. Each table's structure is shown in a separate window, listing columns and their data types. For example, the 'film' table includes columns like 'film_id' (smallint), 'title' (varchar(255)), 'description' (text), 'release_year' (year(0)), 'language_id' (tinyint), 'original_language_id' (tinyint), 'rental_duration' (tinyint), 'rental_rate' (decimal(4,2)), 'length' (smallint), 'replacement_cost' (decimal(5,2)), 'rating' (enum), 'special_features' (set), and 'last_update' (timestamp). Relationships are indicated by lines connecting primary keys in one table to foreign keys in another.

Below the schema diagram, a toolbar contains options: 'Sample Relational Data Browse', 'Sample Query Builder', 'Sample SQL Editor', and 'city X'. A secondary toolbar offers 'Add Table', 'Edit', 'Refresh', 'Filter/Order', and 'Help'.

At the bottom, two data tables are visible:

city_id	city	country_id	last_update
1	Fremont	74	24.09.2008 ...
2	Fresno	30	24.07.2008 ...
3	Portland	91	26.01.2008 ...

Name	Value	Type
country_id	74	Integer
country	Bulgaria	String
last_update	22.10.2008 19:18...	Timestamp
